Castellon.CH | mcp-glp-audit-proxy

FOR LABS, LIFE SCIENCE & UNIVERSITIES

Bring AI into your lab. With a trail you can trust.

A self-hosted proxy that records every AI tool call in a tamper-evident audit trail and lets through only the calls you allow. **Designed to support GLP, 21 CFR Part 11 and EU GMP Annex 11 workflows.**

Your infrastructure. Your policies. Your control.
You decide what information can be sent to external AI providers.

The challenge

AI assistants are starting to query lab, research and business systems directly, through the Model Context Protocol (MCP). In regulated and research settings every action needs to be traceable. Yet plain logs can be edited or deleted without anyone noticing, and many AI set-ups have no audit trail at all.

- **Which tool was called, when, and what was done?**
- **Can you show the record has not been changed?**
- **Can you stop an assistant doing what it shouldn't?**

How it works

1 Connect

Place the proxy between your AI assistant and your systems (over MCP). A setup wizard configures it and checks the configuration.

2 Check & record

Every tool call is recorded: what, when, which tool. Calls not on your allowlist are blocked, and the block is logged.

3 Verify

Each entry is hash-chained to the one before. The verify tool shows if anything was altered or deleted.

Key benefits

Complete, automatic trace
What, when and which tool, for every call, with no manual effort.

Tamper-evident
Any alteration or deletion of the trail is detectable.

Read-only by default
Plus an allowlist: other calls are blocked, and every block is logged.

No friction for your team
Never waits for anyone and never changes message content.

Self-hosted, no phone-home
The audit trail stays on your own infrastructure.

Free to start
Open-source Community edition (MIT), available now, with a setup wizard.

Castellon.CH | mcp-glp-audit-proxy

FOR LABS, LIFE SCIENCE & UNIVERSITIES

Same AI assistants. Every call on the record.

One self-hosted proxy between your AI tools and your systems: unchanged for users, traceable for your teams.

Where it sits

AI assistants
(unchanged for users)

- ChatGPT
- Claude
- Copilot

mcp-glp-audit-proxy
self-hosted · your infrastructure

MCP

Your lab & business systems
(over MCP, allowlisted)

- ELN / LIMS
- File repositories
- Databases
- Internal systems

How it differs

	No audit trail	Generic logging	mcp-glp-audit-proxy
Every AI tool call recorded automatically	✗ No	– Depends on setup	✓ Yes: what, when, which tool
Alteration or deletion is detectable	✗ No	✗ Not by design	✓ Hash chain + verify tool
Only approved calls get through	✗ No	✗ No, logs only observe	✓ Read-only default + allowlist
Runs on your own infrastructure	– n/a	– Varies	✓ Self-hosted, no phone-home
Designed to support GLP, 21 CFR Part 11 and EU GMP Annex 11 workflows	✗ No	✗ No	✓ Yes

Unlike typical AI gateways, which offer logs or observability, mcp-glp-audit-proxy is built around a hash-chained, tamper-evident audit trail and is positioned for GxP and research workflows.

Two editions

Community edition — AVAILABLE NOW

Free, open source (MIT), v0.3.0 · PyPI, MCP Registry, GitHub.

- ✓ Hash-chained JSONL log
- ✓ Verify tool with pinning
- ✓ Allowlist
- ✓ Setup wizard

```
pip install mcp-glp-audit-proxy
```

Pro edition — COMING SOON

For regulated teams that need more.

- SQL/MSSQL and S3 Object Lock storage
- PDF/CSV reports
- Before/after values
- IQ/OQ validation pack

Designed to support GLP, 21 CFR Part 11 and EU GMP Annex 11 workflows. It does not by itself guarantee regulatory compliance and does not replace the validation of your systems.
